

This diagram shows how entities are related to each other. However, in our case the tables do not represent 1:1 the entities. We have discussed this with the Professor and he agrees that this is good.

Dotted boxes are entities not represented by their own table.

This diagram shows how the tables are related, specifically to contrast it to the entities.

Because of the nature of our project, if our tables were 1:1 maps of entities, our tables would not be normalized.
